Topics

State

```
connected = True
is_armed = is_armed
guided = False
manual_input = False
mode = OFFBOARD
system_status = 0
```

ExtendedState

```
vtol_state = 0
landed_state = landed_state
```

BatteryState

```
voltage = 0.0
...
percentage = percentage
...
present = True
...
```

PoseStamped

```
position.x = ?
position.y = ?
position.z = h
orientation.x = ?
orientation.y = ?
orientation.z = ?
orientation.w = ?
```

TwistStamped

```
linear.x = vx
linear.y = vy
linear.z = vz
angular.x = ?
angular.y = ?
angular.z = ?
```

NavSatFix¹

```
status = -1
service = 0
...
```

Drone Model & Nodo DroneWrapper

- ROS param
- Inicio como nodo

```
<?xml version="1.0"?>
<launch>
  <!-- Drone model param -->
  <arg name="drone_model" default="tello"/>
  <param name="drone_model" type="str" value="$(arg drone_model)" />

  <node name="tello_driver_node" pkg="tello_driver" type="tello_driver_node.py" output="screen"/>
  <node pkg="drone_wrapper" type="drone_wrapper_class.py" name="drone_wrapper_node" output="screen"/>
</launch>
```

```
drone_model = rospy.get_param('drone_model', 'iris') # default --> iris

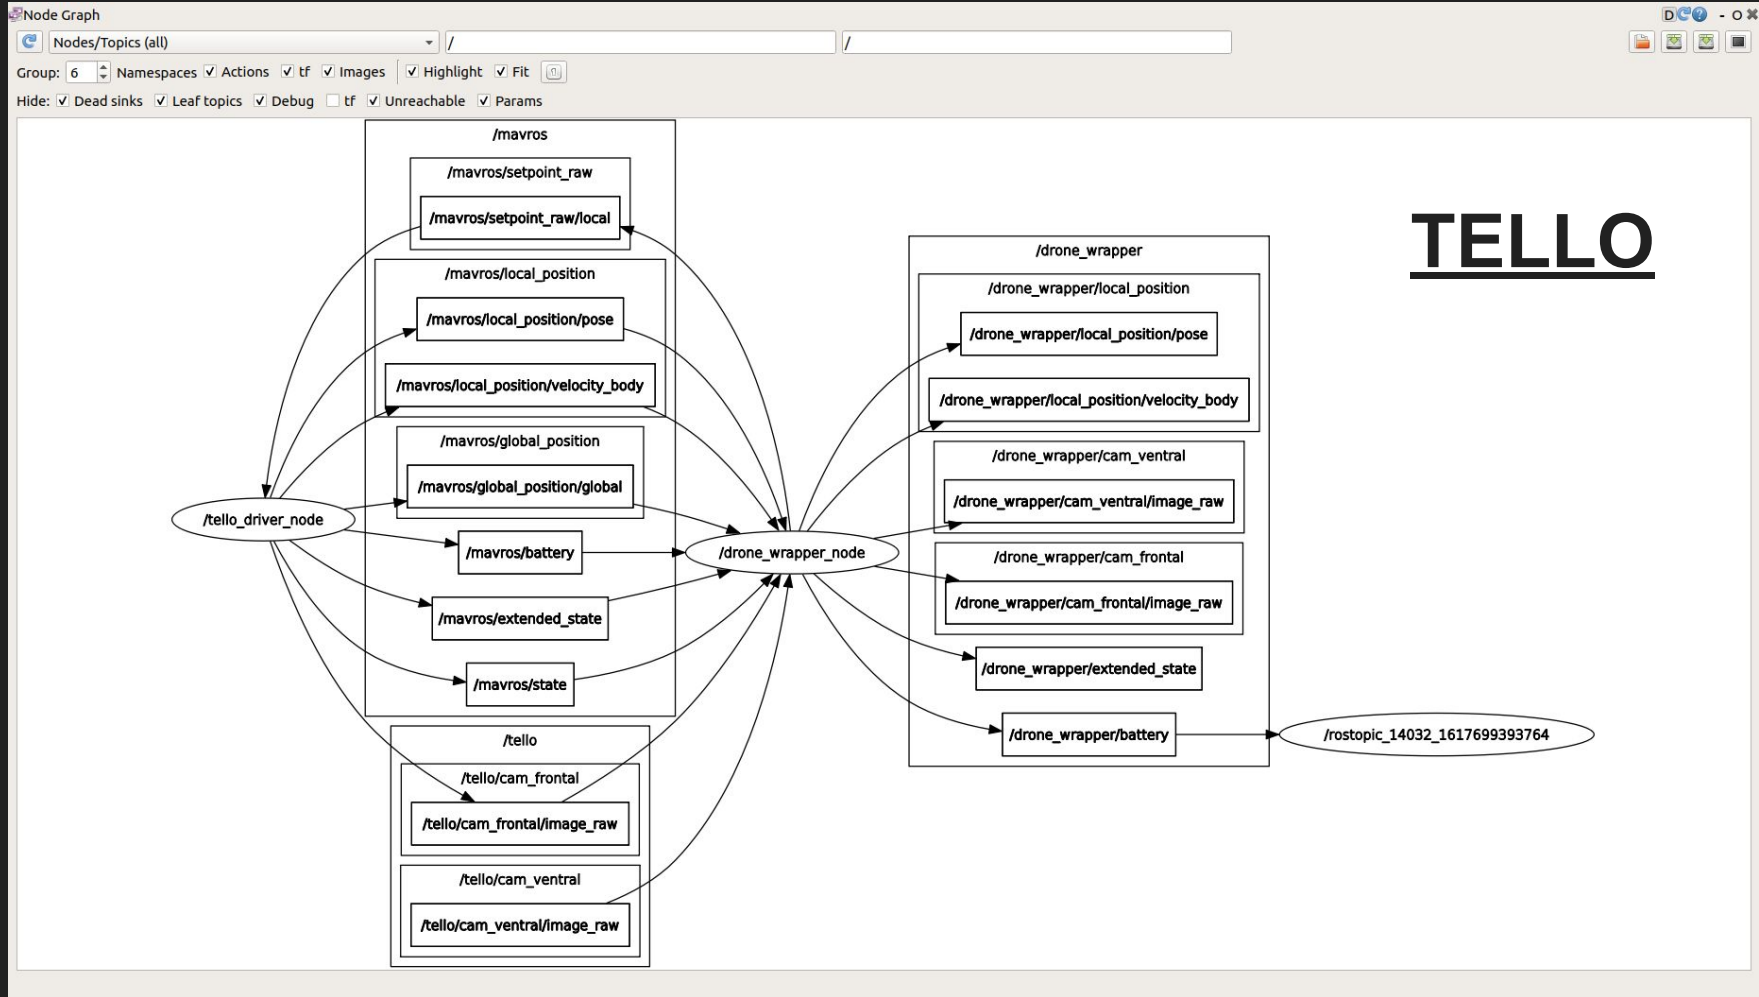

cam_frontal_topic = '/' + drone_model + '/cam_frontal/image_raw'
cam_ventral_topic = '/' + drone_model + '/cam_ventral/image_raw'
rospy.Subscriber(cam_frontal_topic, Image, self.cam_frontal_cb)
rospy.Subscriber(cam_ventral_topic, Image, self.cam_ventral_cb)
```

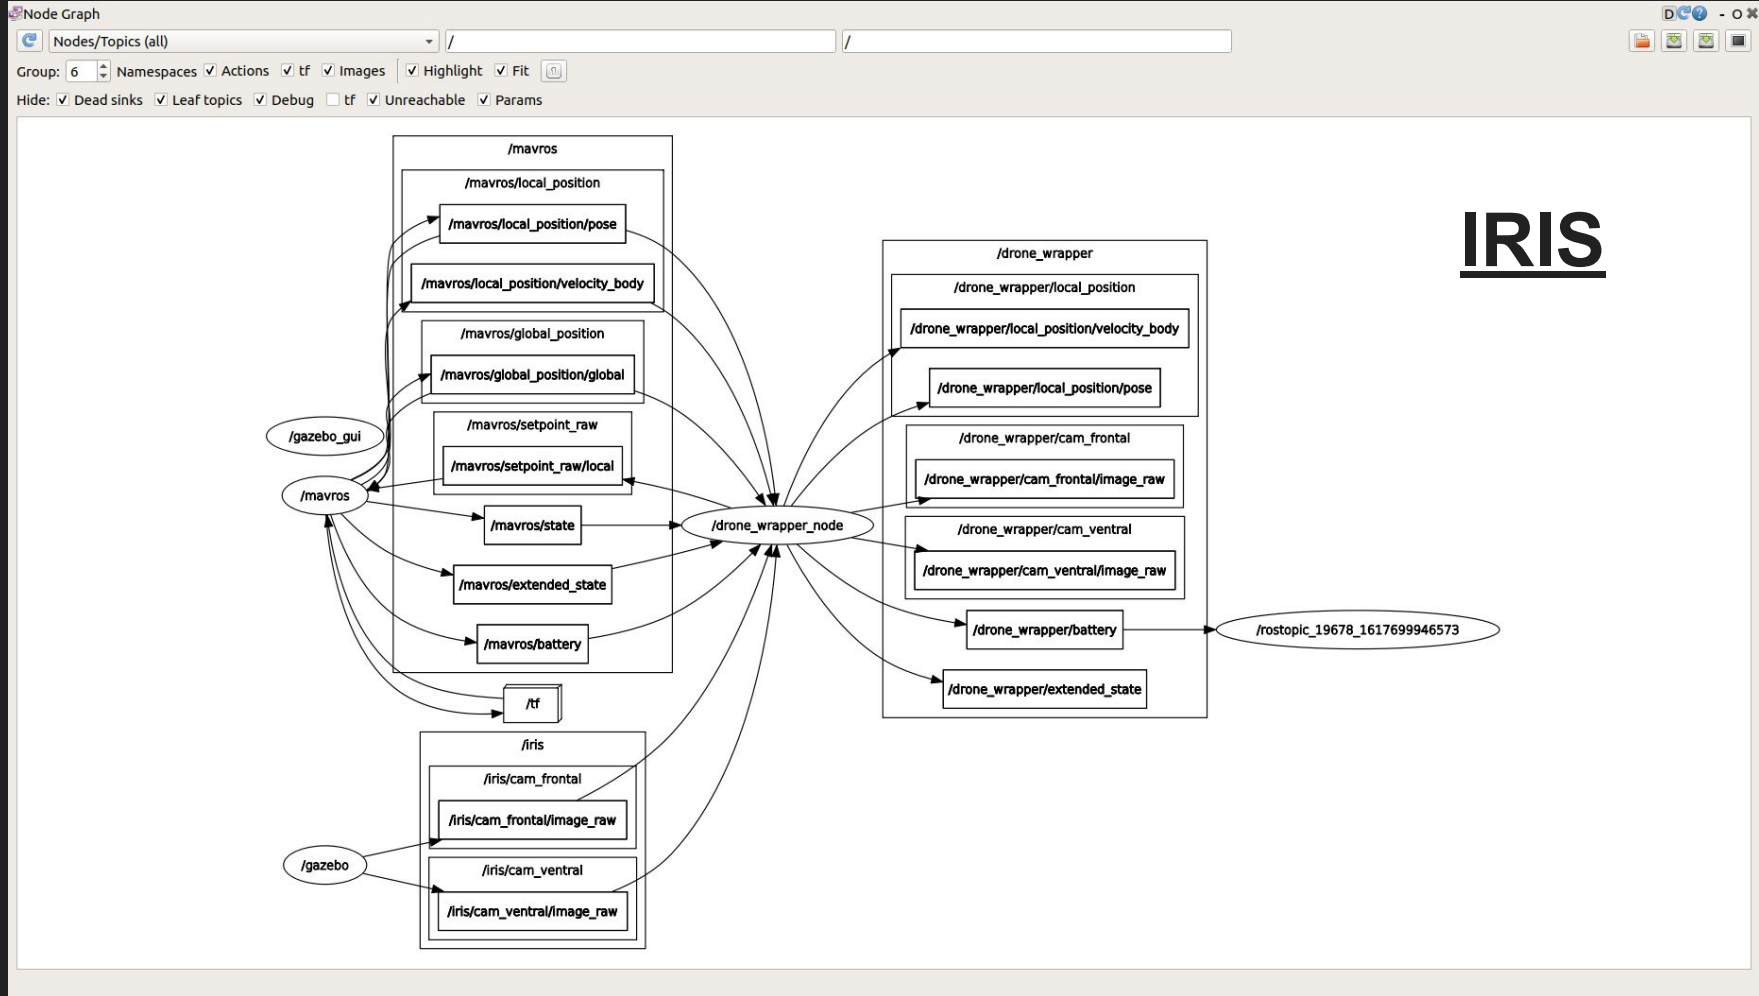

```
class DroneWrapper:

    if __name__ == "__main__":
        drone = DroneWrapper()
        rospy.spin()
```

Drone Wrapper

Problemas

- Imágenes: problemas con instalación de [av](#)
- h.264
- Takeoff
- Setpoint_raw

```
parias@parias-msi: ~  
parias@parias-msi:~$ pip install av  
DEPRECATION: Python 2.7 reached the end of its life on January 1st, 2020. Please upgrade your Python to Python 3.x or later. Python 2.7 is no longer maintained. pip 21.0 will drop support for Python 2.7 in January 2021. More details about Python 2 support in pip can be found at https://pip.pypa.io/en/latest/development/release-process/#python-2-support pip 21.0 will remove support for this functionality.  
Defaulting to user installation because normal site-packages is not writeable

```

Takeoff

- DroneWrapper → arm() + OFFBOARD → go_to_alt
- TelloDriver → siempre offboard, arm() llama a takeoff()

```
def takeoff(self, h=3):
    self.set_cmd_pos(0, 0, 0, 0)
    self.hold_setpoint_raw()
    self.arm(True)
    self.stay_armed_stay_offboard_timer = rospy.Timer(rospy.Duration(3), self.stay_armed_stay_offboard_cb)
    while True:
        while not (self.state.armed and self.state.mode == 'OFFBOARD'):
            self.rate.sleep()
            rospy.loginfo('Sleeping 1 secs to confirm change')
            rospy.sleep(1)
            if self.state.mode == 'OFFBOARD':
                break
        self.set_cmd_mix(z=h)
        rospy.loginfo('Taking off!!!')
        while True:
            if round(self.pose_stamped.pose.position.z, 1) == h:
                break
        self.set_cmd_vel()
```

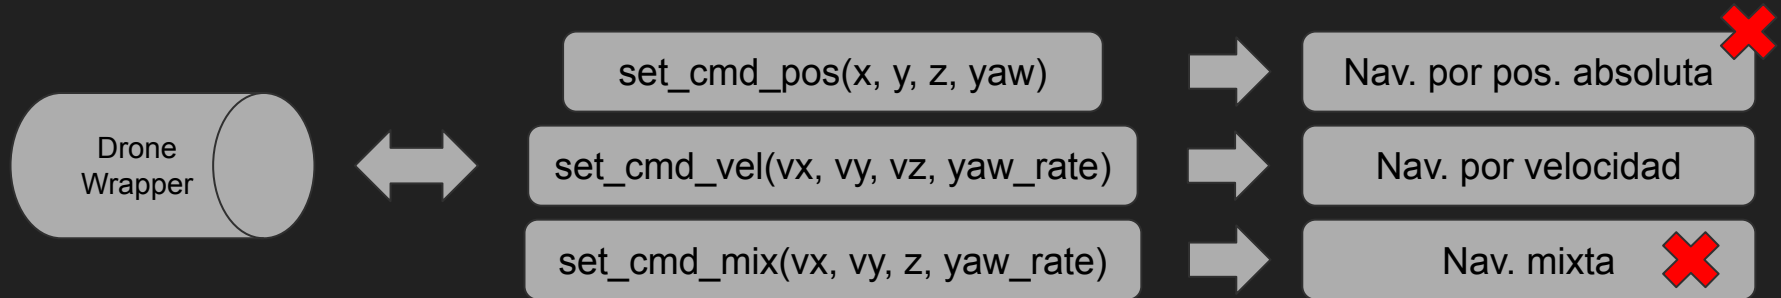

```
def tello_takeoff(self, req):
    ...
    self.takeoff()
    rospy.loginfo("Taking off!")
    return True, 0

def tello_arm(self, req):
    ...
    rospy.loginfo("Tello Arming")
    if req.value:
        tk_req = CommandTOL()
        success, result = self.tello_takeoff(tk_req)
        return success, result
    else:
        return False, 0
```

Setpoint raw

- Tello no posee navegación por posición absoluta. No hay GPS, sólo odometría visual, que permite una navegación por posición relativa al punto actual.

- DroneWrapper:

TODO

- Imágenes: h.264
- Takeoff
- Completar pubs
- Setpoint_raw
